

Product safety recall

Stainless King™ Food Jars

Thermos Pty Ltd

Vacuum insulated stainless-steel food containers available in various colours and sizes.

- model no. SK3000 – 470ml/16oz Stainless King Food Jar
- model no. SK3020 – 710ml/24oz Stainless King Food Jar

Only products supplied from July 2009 to December 2022 are affected by this recall. Current stock is not affected.

Reason the product is recalled

The stopper on affected products does not have a pressure release valve. Pressure may build up inside the container and may cause the stopper beneath the lid to eject forcefully when opened.

The hazards to consumers

Risk of serious injury from impact and lacerations if the affected stopper ejects while in use. Incidents have occurred in the United States resulting in injury, including 3 reports of permanent vision loss after being struck in the eye.

What consumers should do

1. Stop using affected products immediately.
2. Check the underside of the stopper to see if it has a pressure relief feature. If the stopper does not have a pressure relief feature on the base, it is an affected product. The stopper is located beneath the stainless-steel lid.
3. Contact Thermos to arrange a replacement stopper (expected to be available by July 2026). Consumers will need to provide their name, contact details, postal address and a photo of the underside of their affected stopper.
4. When replacement stoppers are available, Thermos will ask consumers to safely dispose of the affected stopper and send a replacement stopper for each affected product at no cost, together with installation instructions.
5. Do not use the affected product until the replacement stopper has been installed. Contact Thermos if you have any further questions or require assistance with the recall.
